Product Bulletin #10 of 2005 Flange Kit for SuperFlow® 350, KMDSI Part #525-027

To compliment the re-designed SuperFlow 350 regulator, KMDSI has introduced the SuperFlow 350 Flange Kit, Part #525-027.

The kit consists of a replaceable flange, a rubber gasket, and two screws. This makes it easy to repair your regulator body in the event the flange is damaged. This change does not affect the breathing performance of the regulator.

This item has been in production since January 2005. Installation by a trained Kirby Morgan technician is recommended.

Parts List for this Kit:

Item	Description	Qty.
510-401	Gasket	1 ea.
530-020	Screw	2 ea.
540-122	Exhaust Flange	1 ea.

The flange kit consists of the flange, a rubber gasket, and two screws.

Note the two screw holes on the back of the regulator body. This is where the flange kit connects to the regulator.
